Project Management

Learn how to turn ideas into strategy, and strategy into results for your team.

Company leaders have a vision, and the people executing on that vision have the skills to build something great. **The Project Manager is the central figure who brings it all together!** In this program, you'll gain the skills and insights to become that central figure. Your Project Management certificate will distinguish you in the job market for this rapidly growing profession.

You'll learn from industry leaders about:

- Nationally recognized frameworks for project management
- Project planning, resources leveraging and management of risk, quality, and expectations
- Project execution, monitoring/control, implementation/handover, DevOps, and project closure
- Programming using Python
- Cost behavior analysis, budgeting, cost volume-profit analysis, standard costs for control and product costing
- Psychological principles as they relate to the practical needs of the workplace

$116k Median annual project manager salary across all industries in the US. (Project Management Institute)

2.2M Employers will need to fill some 2.2 million new project management-oriented roles each year through 2027. (Project Management Institute)

Project Managers are in high demand, but very few new graduates possess the necessary skills to do the job. You will.

Great Minds

To create this Project Management certificate program, a consortium of colleges from across the country consulted with Fortune 500 companies, industry professionals, and leading academics, including:

- Harold Ainsworth, faculty member at University of Sydney & University of Newcastle, and an international consultant on project management.
- Dr. Bob Barnes, former Project Management instructor and Director of Business Development at Duke University's Pratt School of Engineering.
- Mala Sarat Chandra, a technology pioneer named one of the 25 most influential women in the development of the internet.
- Alexey Malashkevich, Founder, AgileCode, whose skill in building engineering teams gives him particular insight into the skills most valuable in today's technology workforce.
